

## Elevator Speech

We are going to be using 3D printers to be able to complete our task, which will take up to six weeks.

Our idea is to have a stop motion animation, using 3D printed animals and props and cosmetics. Our idea is to have an animal opening its mouth and having another animal, crawl out of it, with the process repeating. Each person will make one or two animals, which will be used inside of our animation.

All of the jobs we will have for this animation will be:

People	Photographers	Designers	Printers	Editor
Henri	X	X	X	X
Bailey		X		X
Tyler	X	X		
Orion	X	X	X	

We will need 4 Ipads and the 3D printers.  
This project will take 6 weeks.
