(A)

Write the equation of a straight line that has a slope of  $-\frac{3}{7}$  and a y-intercept of  $(0, 7)$ .

$$y = -\frac{3}{7}x + 7$$

$$y = -\frac{3}{4}x + 7$$

$$y = mx + b$$

If absent from my class:

1. Always check my blog for details, etc
2. Always check the **Class Papers** Basket for...
3. Ask for the solutions to the previously scored assignment so you can check your work, etc.

## Goals Today

- ① Use the ZERO PRODUCT PROPERTY
- ② Use Graphing Calculators to analyze functions and make "complete" Graphs.

Product of  
factors

$$3 \cdot 7 = 21$$

$$2 \cdot b = 10$$

do we know anything  
about the factors?

$$a \cdot b = 24$$

$$a \cdot b = 0$$

if  $a \cdot b = 0$   
then  $a = 0$  or  $b = 0$

ZPP

### 3 Examples

Solve each quadratic equation using the zero product property

a)  $(3x-4)(2x-5) = 0$

/ ZPP \

$3x-4=0$ $3x=4$ $x = \frac{4}{3}$	$2x-5=0$ $2x=5$ $x = \frac{5}{2}$ $x = 2.5$
---	--

b)  $n^2 + 8n = 0$       NO FACTORS, Yet

$n(n+8) = 0$

/ ZPP \

$n=0$	$n+8=0$ $n=-8$
-------	-------------------

c)

$$4x^2 - 11x - 3 = 0$$

$$(x-3)(4x+1) = 0$$

2PP

$$x-3=0$$

$$x=3$$

$$4x+1=0$$

$$4x = -1$$

$$x = -\frac{1}{4}$$

$$(4x+1)(x-3) = 0$$

zero product  
property

$$-12x + x$$

TODAY'S AIM:

Use graphing calculators  
to

- make "Complete Graphs"
- Analyze functions

- have one person get a GDC for each person in your group.
- the same person will return all of them.

In your Notes

will need a half  
piece of graph paper

$$y = 2\sqrt{9-x} - 4$$

1. What are the locations of key points ?
2. What is the domain ?
3. Is there a maximum or minimum y-value ?  
If so, what is it?
4. Can we identify **5** integer inputs and their outputs ? (five graphing friendly points)

### Make a Complete on Graph Paper

- Plot points accurately
- Scale axis appropriately
- Label key points
