

Agenda

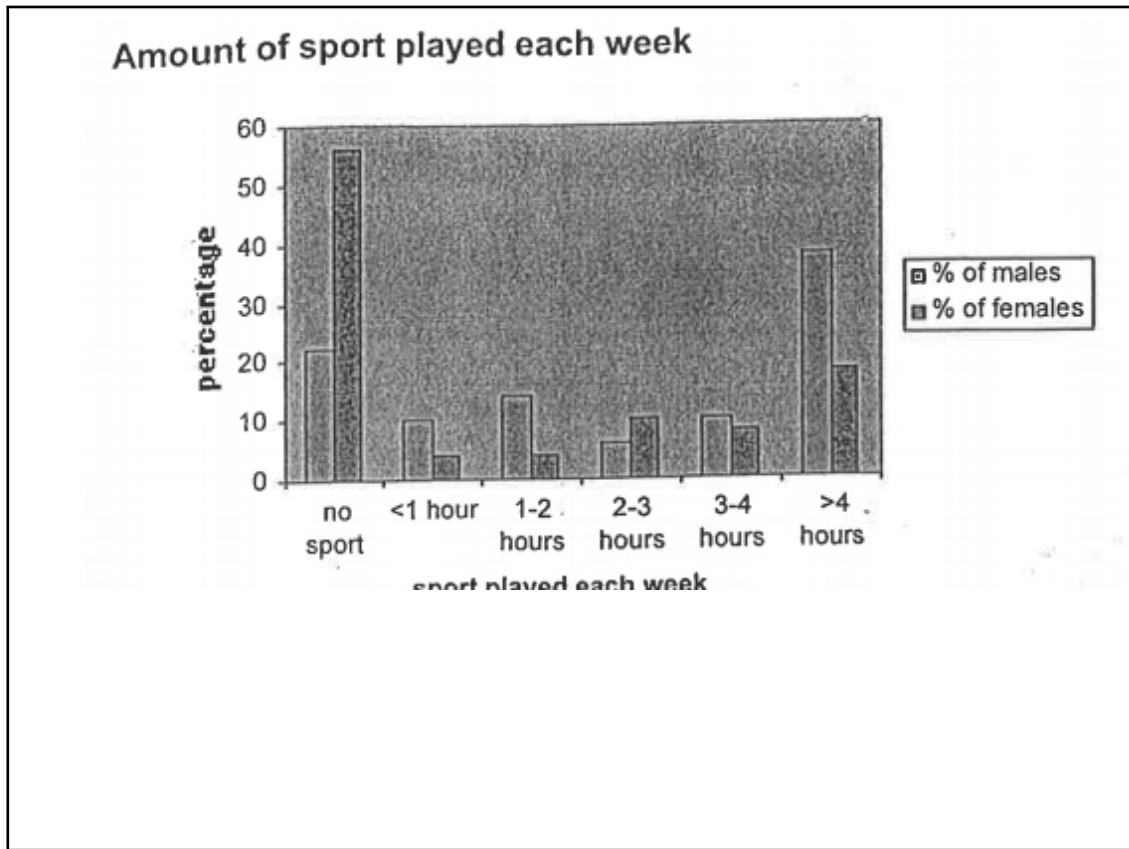

- 1 Past project ideas and see samples of some graphs that count as simple math processes.
- 2 Questions on the *Geometry Trig Packet* so far ?
- 3 Work on "14 Problems"
Due Tuesday
We start a new unit on Monday.

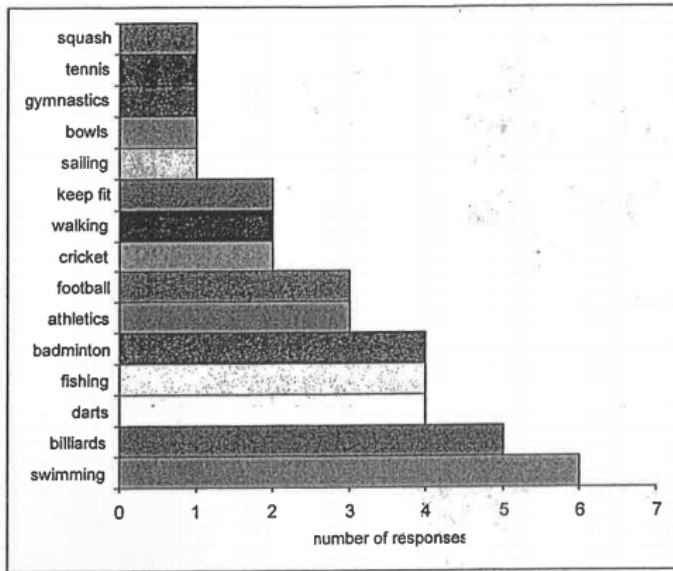

(Histogram was generated through Apple Numbers)

Sports played by those answering "more than 4 hours a week"

Amount of sport played each week

Often it is interesting to compare the answers of different groups of people, for example men and women.

Comparison bar charts

Do you play sport?

A nice supporting math process with the χ^2 test of Independence

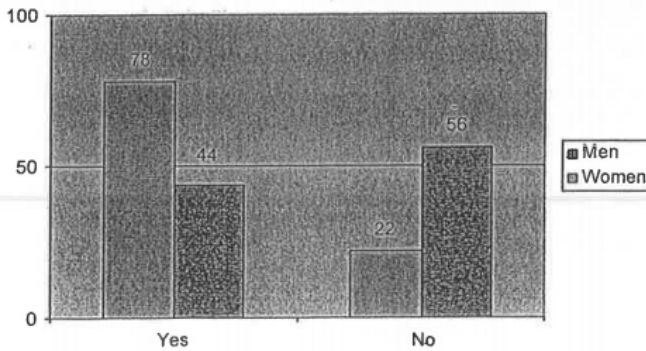

This chart shows that more men than women play sport.

This chart shows that more men than women play sport.

But these are 'raw' figures: 23 men and 27 women were asked this question.

So that you can make a fair comparison, you must compare the **percentage of men** playing sport with the **percentage of women** playing sport.

$$\frac{18}{23} = 78\%, \quad \frac{5}{23} = 22\%, \quad \frac{12}{27} = 44\%, \quad \frac{15}{27} = 56\%$$

Questions on the *Geometry Trig Packet* so far ?

(solutions posted)...

Work on "14 Problems"

Due Tuesday

We start a new unit on Monday.
