

1. HW help 

2 Pick Up the Warm Up

only do questions  
1 and 3  
for now

1. **Factor** the following two expressions. *In case you forgot what factoring means... It means try to create two or more factors that are multiplied together. The final expression must be equal to the original.*

a)  $5n - 30$

$5(n - 6)$

b)  $8x^4 - 2x^2$

$2x^2(4x^2 - 1)$

c)  $n^2 - 4$

$(n + 2)(n - 2)$

2. Factor the following quadratic polynomial expression into two binomial factors. *The box/diamond method is one way to do this.*

$12x^2 - 8x - 15$

## Notes from Day 4

3. Determine the equation of the straight line that passes through  $(-6, 11)$  and  $(15, -3)$   
(Use your reference sheet for a hint if you get stuck)

$$-3 = -\frac{2}{3}(15) + b$$

$$y = m x + b$$

$$11 = -\frac{2}{3}(-6) + b$$

$$11 = 4 + b$$

$b = 7$

$$y = -\frac{2}{3}x + 7$$

DOMAIN

what are the x-values that are needed in a function?

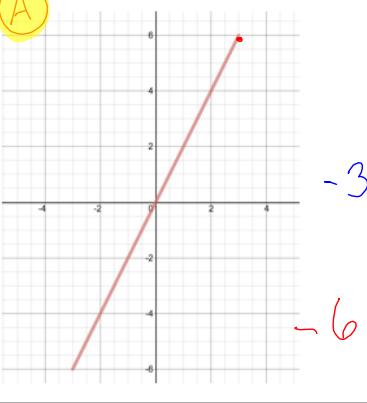

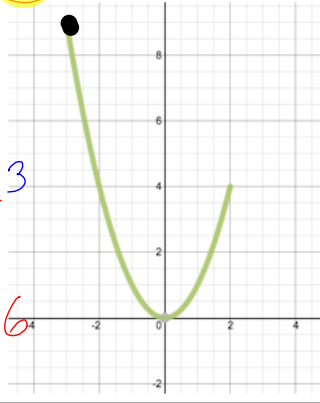

Range

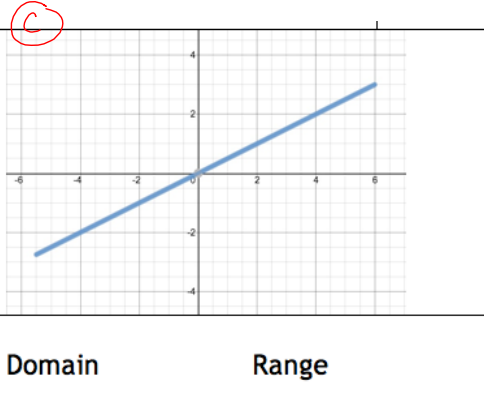

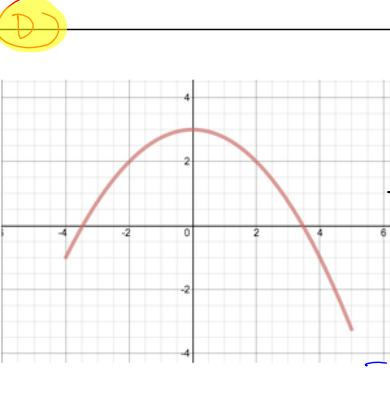

what are the y-values?

Notes from Day 4

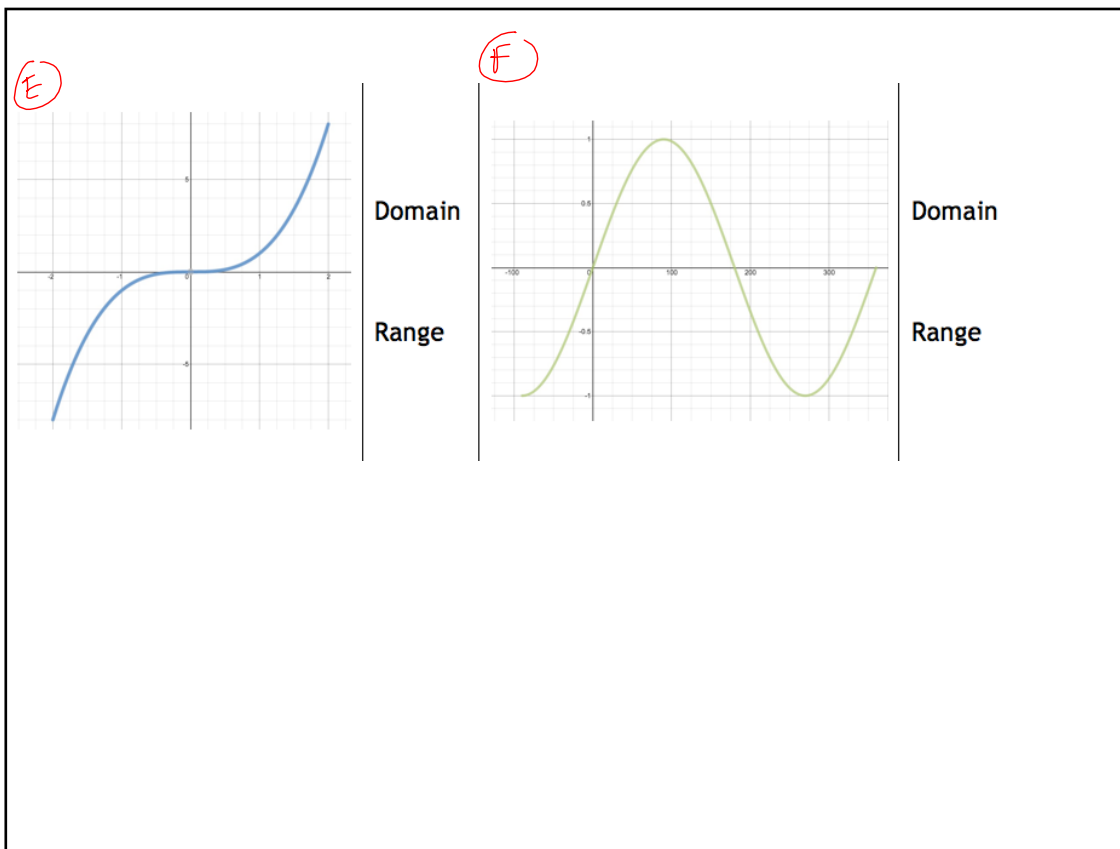

**Domain and Range**

For each of the functions shown, state both the domain and the range.

<p><b>(A)</b></p>  <p>Domain  <math>-3 \leq x \leq 3</math></p> <p>Range  <math>-6 \leq y \leq 6</math></p>	<p><b>(B)</b></p>  <p>Domain  <math>-3 \leq x \leq 2</math></p> <p>Range  <math>0 \leq y \leq 9</math></p>
--	--

<p><b>(C)</b></p>  <p>Domain</p> <p>Range</p>	<p><b>(D)</b></p>  <p>Domain  <math>-4 \leq x \leq 5</math></p> <p>Range  <math>-3 \leq y \leq 3</math></p>
--	---

## Notes from Day 4

HW  
Questions ?

## Notes from Day 4

$$\textcircled{7} \quad 3(6) \frac{x}{2} + (6)2x - 1(6) = 2(6) \frac{2}{15}x$$

$$\underline{3x} + \underline{12x} - 6 = 4x$$

$$\begin{array}{r} 15x - 6 = 4x \\ -4x \end{array}$$

$$11x - 6 = 0$$

$$x = \frac{6}{11}$$

$$\begin{array}{r} 11x = 6 \\ \hline \hline \end{array}$$

$$\textcircled{10} \quad 12x^2 - 8x + 20$$

$$4(3x^2 - 2x + 5)$$

Factor out  
what is  
common

## Notes from Day 4

$$9k^2 - 1$$

$$(3k + 1)(3k - 1)$$

# Schedule

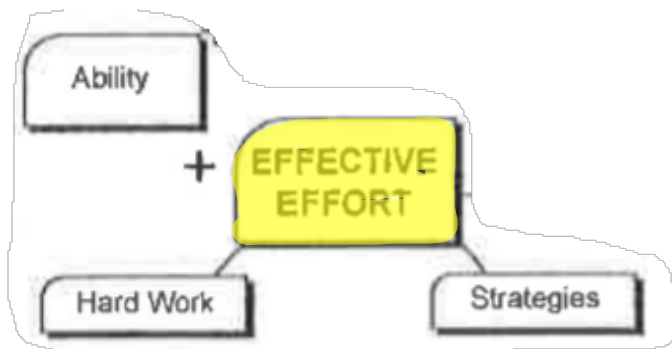

M, T, W      Continue to work on  
Transfer skills

Thursday      -      First Test

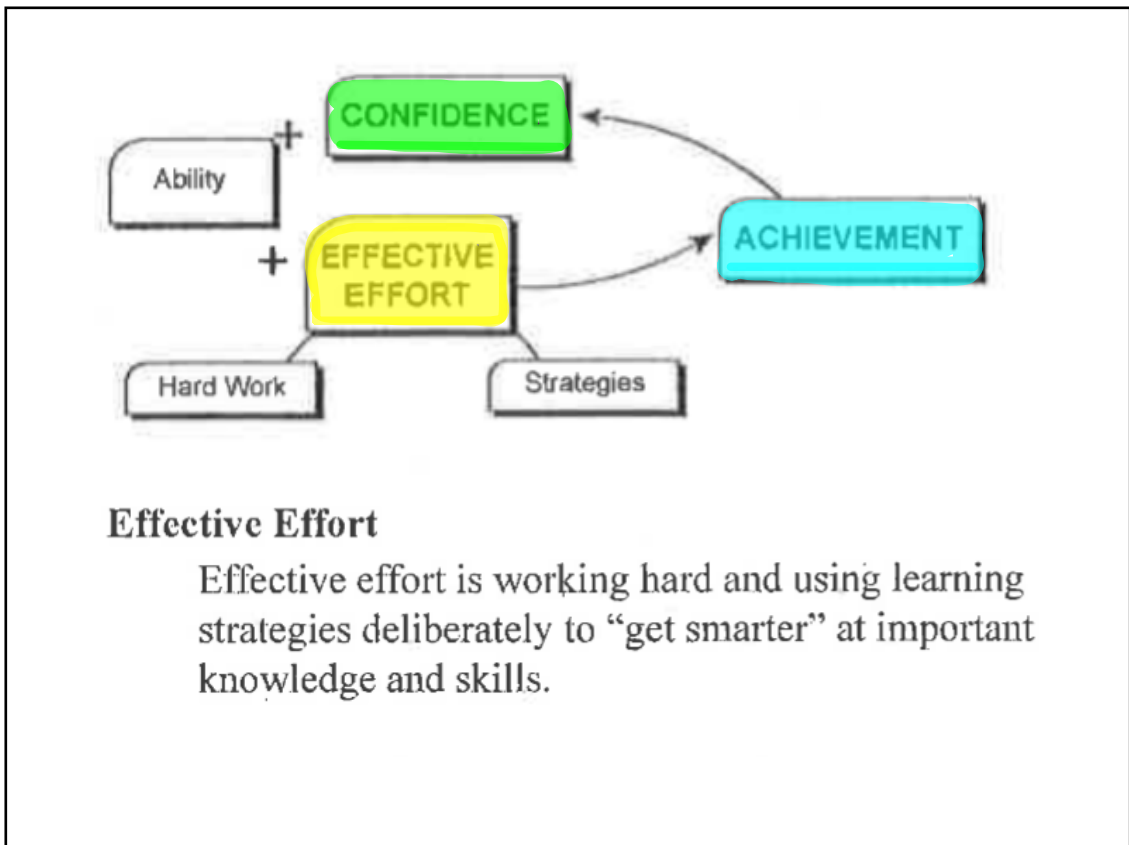

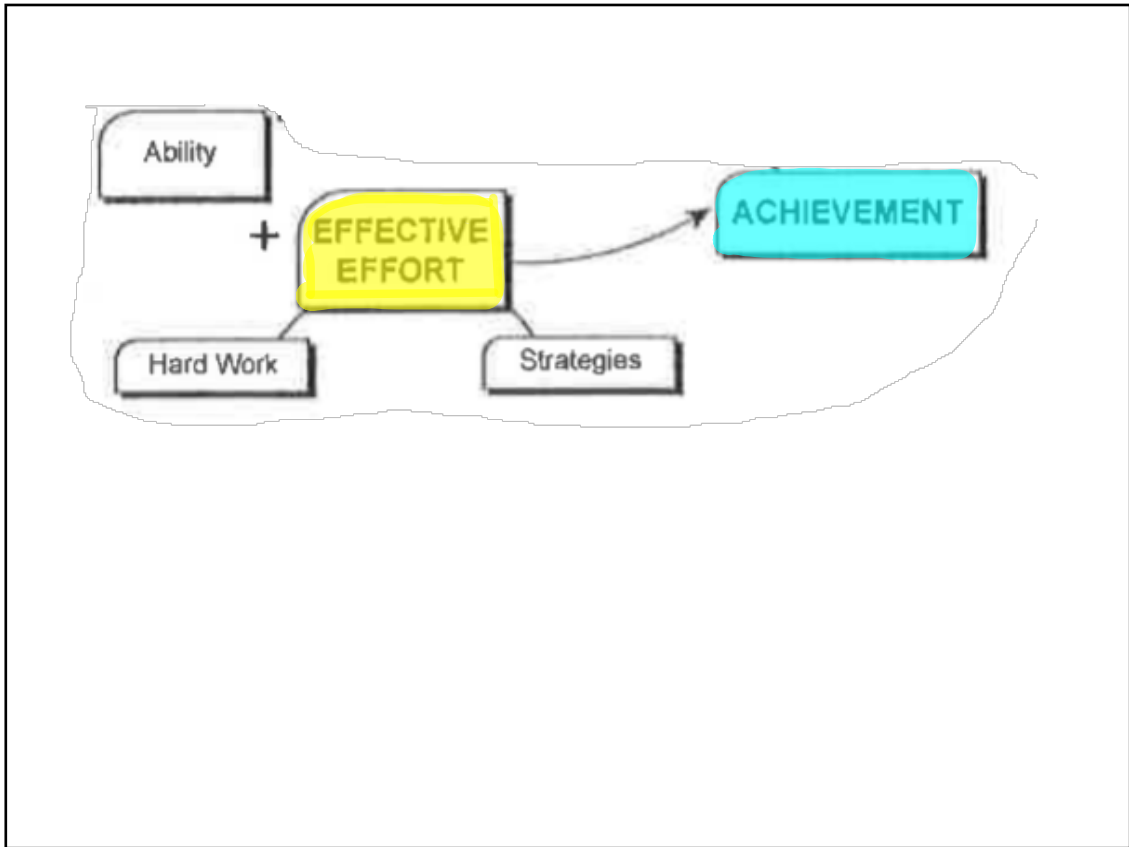

Ability

## Notes from Day 4

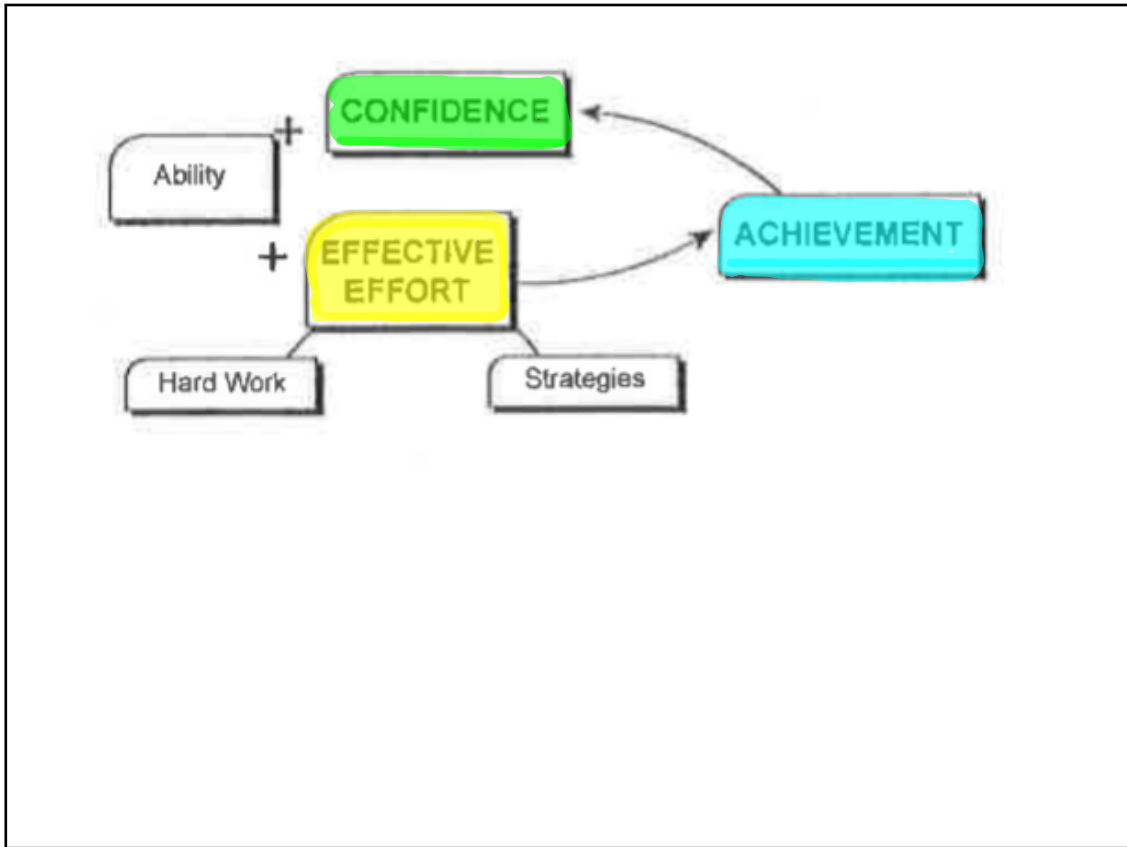

## Notes from Day 4

### Effective Effort

Effective effort is working hard and using learning strategies deliberately to “get smarter” at important knowledge and skills.

## Notes from Day 4

### What It Means to Work Hard

- **Time:** A willingness to spend the hours needed to finish the job well
- **Focus:** Concentrating only on the work; no TV or other distractions
- **Resourcefulness:** Knowing where to go and whom to ask for help when I'm really stuck
  - **Use of feedback:** Looking carefully at responses to my work so I know exactly what to fix
- **Commitment:** Being determined to finish and do my very best work
  - **Persistence:** If one strategy isn't working, trying different ones until I find one that works

Aim #1

Use function language  
and notation

$$y = f(10)$$

Clarification before  
we start

$$f(x) = 10$$

$$f(x) = 4x + 2$$

input 10  
output  $4(10) + 2$

$x = 10$  ← input  
 $f(10)$  ← output

Notes from Day 4

$$y = 2x - 7 \quad y = -3n + 10 \quad y = 2x^2 - 1$$

$$f(x) = 2x - 7 \quad g(n) = -3n + 10 \quad h(x) = 2x^2 - 1$$

means to  
Evaluate the function

$$f(-3) = 2(-3) - 7 = -6 - 7 = -13$$

$$f(-3) = -13$$

$$g(0) = -3(0) + 10 = 10$$

$$h(-4) = 2(-4)^2 - 1$$

$$2(16) - 1 = 31$$

find  $x$  if  $f(x) = 5$

the output  
is 5

$$f(x) = 2x - 7$$

$$f(6) = 5$$

$$5 = 2x - 7$$

$$12 = 2x$$

$$x = 6$$

find  $n$  if  $g(n) = 23$

$$g(n) = -3n + 10$$

# Evaluating Functions on graphing calculators

$$f(x) = x^2 - 4x + 4$$

input  output 

$x$	$f(x)$
0	
1	
2.3	
3	
4	
12	
-5	

return calculators

B.B.

Aim #2

Aim # 2

Multiply (simplify)  
Binomial products

Notes from Day 4

FOIL

$$(x+5)(x+7)$$

$$x^2 + 7x + 5x + 35$$

$$\underline{x^2 + 12x + 35}$$

HAPPY FACE

$$(a-11)(a+2)$$

$$a^2 - 11a + 2a - 22$$

$$a^2 - 9a - 22$$

Box

$$(3w+4)(2w-1)$$

	$3w$	$4$
$2w$	$6w^2$	$8w$
$-1$	$-3w$	$-4$

$$6w^2 + 5w - 4$$

$$(x+3)(4x^2+3x+1)$$

## A matter of taste.
