

Alg 2 Foundations (Review Problems for Ch. 1 TEST)

- Do the following problems on separate paper, showing your work as necessary.
- Check your answers on the answer sheet.
- Note: You have been learning about your graphing calculator the last few days. You can use them on the first test BUT there will be no questions requiring them on this first test.

Linear Practice

- Write the equation of the line that has a slope of $-\frac{3}{5}$ and a y-intercept of 11.
- Determine the equation of a line that passes through $(-3, 2)$ and $(0, -1)$
- Determine the equation of a line that passes through $(15, 5)$ and $(-10, -5)$
- Given the equation $2x - 7y = 3$, determine the slope and y-intercept.
- Graph the line (on graph paper), $y = \frac{2}{3}x + 4$
- Graph the line (on graph paper) $y = -2x - 1$
