If absent from my class:

1. Always check my blog for details, etc
2. Always check the **Class Papers** Basket for...
3. Ask for the solutions to the previously scored assignment so you can check your work, etc.

$g(x) = \sqrt{x-5}$

$h(x) = x^2 - 6$

a. 6

$h(x) = x^2 - 6$

$h(6) = 6^2 - 6 = 30$

$g(x) = \sqrt{x-5}$

$g(30) = \sqrt{30-5} =$

b) the exponent

c) A parabola

9 $y = mx + b$ is a straight line.

b represents the y -intercept and

m is the slope.

x is the input, y the outputs

1. $y = x^2$
- **1-8.** The graph for part (d) of problem 1-7 is different from the other three graphs. [Homework Help](#)
 1. Explain how the graph is different from the other three graphs.
 2. What in the equation of part (d) makes its graph different?
 3. What is the graph of part (d) called?

- (8)
1. When you graph an equation such as $y = 3x - 5$, which variable (the x or the y) *depends* on the other? Which is not dependent? (That is, which is *independent*?) Explain.
 2. Which variable is *dependent*: temperature or time of day? Which variable is *independent*?
 3. Sketch a graph (with appropriately named axes) that shows the relationship between temperature outside and time of day.

$$\boxed{21d} \quad f(x) = -\frac{2}{3}x + 3 \quad g(x) = 2x^2 - 5$$

$$\textcircled{a} \quad f(3) = -\frac{2}{3}(\cancel{3}) + 3 = 1$$

$$\textcircled{d} \quad \text{Solve } g(x) = -7 \quad \begin{array}{l} -7 \\ +5 \end{array} = \begin{array}{l} 2x^2 - 5 \\ +5 \end{array}$$

Goals Today

- ① Use the ZERO PRODUCT PROPERTY
- ② Use Graphing Calculators to analyze functions and make "complete" Graphs.

Product of
factors

$$3 \cdot 7 = 21$$

$$2 \cdot b = 10$$

do we know anything
about the factors?

$$a \cdot b = 24$$

$$a \cdot b = 0$$

Z.P.P.

Zero
Product
property

if $a \cdot b = 0$
then $a = 0$ or $b = 0$

3 Examples

Solve each quadratic equation using the zero product property

$$a) (3x-4)(2x-5) = 0$$

$$a \cdot b = 0$$

$$3x-4=0 \quad 2x-5=0$$

$$3x=4$$

$$x = \frac{4}{3}$$

$$2x=5$$

$$x = \frac{5}{2}$$

$$x = 2.5$$

$$(3x-4)(2x-5) = 0$$

$$6x^2 - 17x + 20 = 0$$

$$b) n^2 + 8n = 0$$

$$n(n+8) = 0$$

$$a \cdot b = 0$$

$$n=0 \quad n+8=0$$

$$n = -8$$

NO FACTORS, yet

~~$$n^2 = -8n$$

$$\frac{n^2}{n} = \frac{-8n}{n}$$

$$n = -8$$~~

c)

$$4x^2 - 11x - 3 = 0$$

$$(4x+1)(x-3) = 0$$

ZPP

$$4x+1=0 \quad x-3=0$$

$$4x = -1$$

$$x = -\frac{1}{4} \quad x = 3$$

$$(4x+1)(x-3) = 0$$

zero product
property

	$4x$	1	
x	$4x^2$	x	
-3	$-12x$	-3	

$\begin{matrix} -12x^2 \\ -11x \end{matrix}$

$\begin{matrix} -12x & x \\ 12x & -x \\ 6x & -2x \\ -6x & 2x \\ 4x & -3x \\ -4x & 3x \end{matrix}$

TODAY'S AIM:

Use graphing calculators
to

- make "Complete Graphs"
- Analyze functions

- have one person get a GDC for each person in your group.

In your Noteswill need a half
piece of graph paper

$$y = 2\sqrt{9-x} - 4$$

1. What are the locations of key points ?
2. What is the domain ?
3. Is there a maximum or minimum y-value ?
If so, what is it?
4. Can we identify 5 integer inputs and their outputs ? (five graphing friendly points)

Make a Complete on Graph Paper

- Plot points accurately
- Scale axis appropriately
- Label key points
