

● demo

<https://www.desmos.com/calculator/yhbu6l5h8b>

be sure to go over the question 24  
on HW to establish the same "a"  
value in both forms

We had a Quiz yesterday

(if absent you should talk to me today before you leave.)

Also... if you don't make up LCQ's within a reasonable amount of time, they get scored as a zero and will mostly likely count as one of the dropped LCQ's for you.

Let me know if you have  
questions from  - 23 to 29

Do question  
#1 on the  
Warm Up

← only!

1 Sketch  $y = \frac{1}{3}(x+7)^2 + 2$   
without GDC

$$y = x^2$$

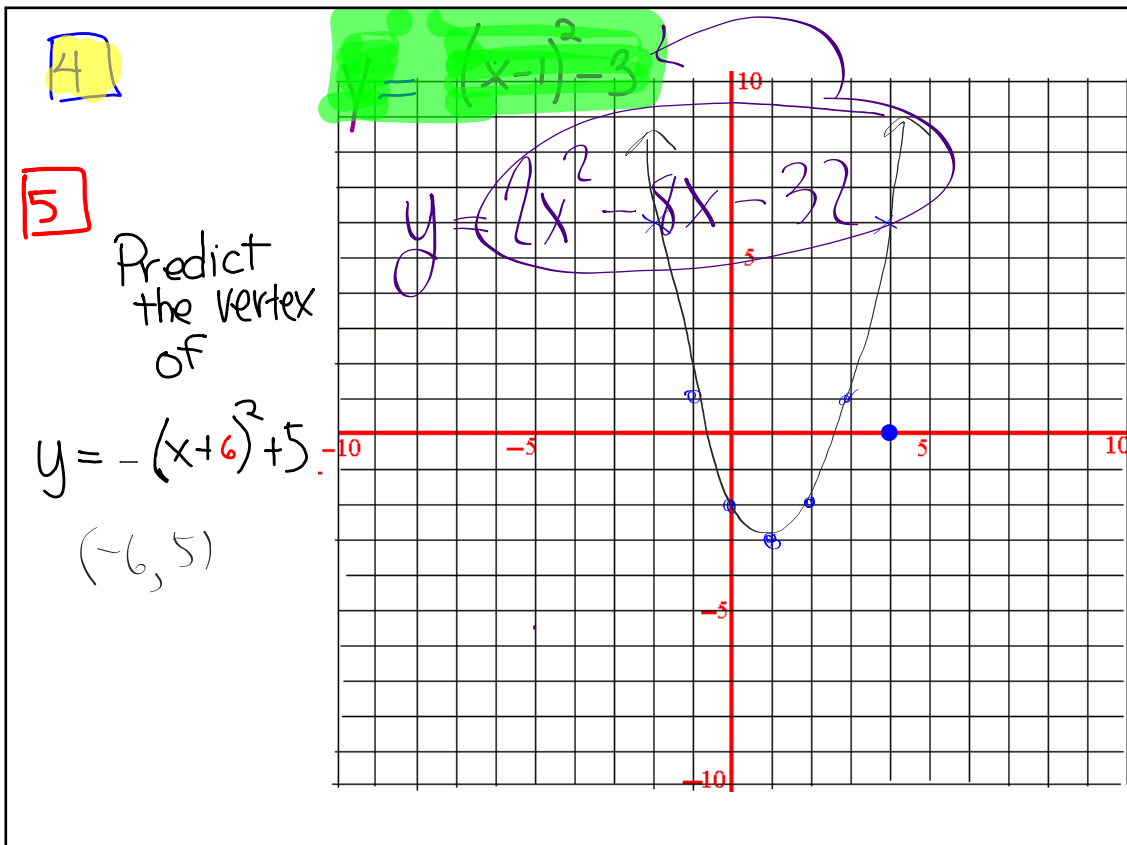

2

Quick Graphs  
of Parabolas

Graphing "Tricks"  
to speed up  
detailed graphing

$$y = x^2$$

limited  
Questions  
on HW

25c downward opening   
vertex  $(-7, -2)$   
Vert. compression of 0.6

$$y = -0.6(x+7)^2 - 2$$

24

$$y = 3(x-1)^2 - 5$$

$$3(x-1)(x-1) - 5$$

$$(3x-3)(x-1) - 5$$

$$3x^2 - 3x - 3x + 3 - 5$$

$$3x^2 - 6x + 3 - 5$$

$$y = 3x^2 - 6x - 2$$

$$(-1)^2 = \cancel{+1}$$

$$(x-1)(x-1) = \cancel{x^2 + 1}$$

(c) Why should "a" be the same in both forms?

Same graph so must have the same stretch factor

28a

$$\frac{\sin A}{a} = \frac{\sin B}{b}$$

$$\frac{\sin 20^\circ}{17} = \frac{\sin 110^\circ}{x}$$

29 Parents spend 300/mo food

$$100\% + 4\% = 104\%$$

(a) 5 years inflation  $y = 300(1.04)^5$

(b) x - years from

$$y = 300(1.04)^x$$

27

$$\sqrt{72}$$

$$\sqrt{4} \sqrt{18}$$

$$2 \sqrt{9 \cdot 2}$$

$$2 \cdot 3 \cdot \sqrt{2}$$

$$6\sqrt{2}$$

$$\sqrt{18}$$

$$\sqrt{36 \cdot 2}$$

$$(6\sqrt{2})$$

4

9

16

25

36

(30)

24c

$$y = 3(x-1)^2 - 5$$

$$y = 3(x-1)(x-1) - 5$$

$$y = 3x^2 - 6x - 2$$

$$3x^2$$

25b

Parabola stretch factor of 10  
Vertex on x-axis at  $x = -6$

a)  
b)

c)

26

 $(3, -7)$ slope  $\frac{2}{3}$  $(3, -7)$ 

Today's objective(s)

Continue graphing parabolas given  
graphing form

Graph from standard form  
(by converting to graphing form)

Graphing Form of a parabola

parent:  $y = x^2$

$$y = a(x-h)^2 + k$$

Desmos

# Demo of Graphing Form of a Parabola.

$$y = a(x-h)^2 + k$$

Vertical stretch factor  
 if negative parabola opens down.

horizontal translation constant  
 $(x+3)^2$   
 slide to the left

vertical translation constant

## Partner Sketching Activity

Pairs, one person is an A, the other a B.

Pairs should sit side by side

(A) sketches the graph on the left while B checks their answer (or coaches/helps) as needed

Switch Roles

Turn your GDC over or take it off your desk.

Each pair will work on one sheet and will take turns.

$$\textcircled{a} \quad y = (x+6)^2 + 2$$

$$\textcircled{b} \quad y = (x)^2 + 7 \\ = (x-0)^2 + 7$$

$$\textcircled{c} \quad y = 3x^2$$

$$\textcircled{d} \quad y = \frac{1}{2}(x-1)^2$$

Convert standard form  
to graphing form  
(using x-intercepts)

$$y = x^2 - 4x + 11$$

std. form

$$y = (x-2)^2 + 7$$

graphing form

2      10

$$y = x^2 - 11x + 20$$

Convert  $y = 2x^2 + 4x - 30$   
to graphing  
form

A) What is the stretch  
factor ?

$$y = 2x^2 + 4x - 30$$

and orientation

$a = 2$

B) Find the x-intercepts  
(and average them)  $(3, 0)$   $(-5, 0)$   
by... setting  $y = 0$

$$2x^2 + 4x - 30 = 0$$

$$2(x^2 + 2x - 15) = 0$$

$$2(x-3)(x+5) = 0$$

$x-3=0$     $x+5=0$   
 $x=3$     $x=-5$   
 X-intercepts

Average  $\frac{3 + (-5)}{2} = \frac{-2}{2} = -1$

Vertex  $(-1, -32)$   
 $y = 2(-1)^2 + 4(-1) - 30$

Graph Form  $y = 2(x+1)^2 - 32$

$$2x^2 + 4x - 30 = 0$$

$$a = 2$$

$$b = 4$$

$$c = -30$$

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a} = \frac{-(4) \pm \sqrt{(4)^2 - 4(2)(-30)}}{2(2)}$$

$$x = \frac{-4 \pm \sqrt{256}}{4} = \frac{-4 + 16}{4} = \frac{12}{4} = 3$$

$$= \frac{-4 - 16}{4} = \frac{-20}{4} = -5$$

**Assignment:****2** - ... 35 - 38, 39abc, 40..... 41 is an optional challenge

©

$$y = 2x^2 + 4x - 30$$
