Summary

- check for underst. problems with answers
- Multiple Choice Practice
- FRAPPY!
-

Strive for 5

- Available to check out
- CAN'T write in it.
- Keep at home

ch²
Homework

due tomorrow ... out of $\textcircled{20}$

... up through yesterday's assignment.

Frappy!

- real benefits of doing and then comparing to actual rubric
- benefits - for tomorrow's test
- moving forward.

When finished

- Look at the Model Solution
- Look at the Scoring Rubric and score your a, b, c, and d
- Then score the 2 samples and read the Commentary

Review Options

- Review Exercises [PP 147-148]
- has video solutions
- Ch. 2 AP Stats Practice Test [PP 148-150]
- Strive for 5

The distribution of scores on a recent test closely followed a Normal distribution with a mean of 22 points and a standard deviation of 4 points.

- (a) What proportion of the students scored at least 25 points on this test?

(b) What is the 31st percentile of the distribution of test scores?

(c) The teacher wants to transform the test scores so that they have an approximately Normal distribution with a mean of 80 points and a standard deviation of 10 points. To do this, she will use a formula in the form:

$$\text{new score} = a + b (\text{old score})$$

Find the values of a and b that the teacher should use to transform the distribution of test scores.

(d) Before the test, the teacher gave a review assignment for homework. The maximum score on the assignment was 10 points. The distribution of scores on this assignment had a mean of 9.2 points and a standard deviation of 2.1 points. Would it be appropriate to use a Normal distribution to calculate the proportion of students who scored below 7 points on this assignment? Explain.
