

① HW Help

②

WARM UP

pick up

①

Solve for n

$$2m - (3+n) = 100m$$

$$\begin{array}{r} -2m \qquad \qquad -2m \end{array}$$

$$-(3+n) = 98m$$

$$\begin{array}{r} -3 - n = 98m \\ +3 \qquad \qquad +3 \end{array}$$

$$-n = 98m + 3$$

So

$$n = -98m - 3$$

$$\textcircled{2} \quad \frac{1}{3} |10-x| = 5+x$$

multiply all three terms by 3

$$|10-x| = 15+3x$$

● inside = right side

inside = opp of right side

●

$$\textcircled{2} \quad \frac{1}{3} |10-x| = 5+x$$

multiply all three terms by 3

$$|10-x| = 15+3x$$

● inside = right side

inside = opp of right side

$$10-x = 15+3x$$

$$10 = 15 + 4x$$

$$-5 = 4x$$

$$x = -\frac{5}{4}$$

$$10-x = -(15+3x)$$

$$10-x = -15-3x$$

$$10+2x = -15$$

$$2x = -25$$

$$x = -\frac{25}{2}$$

●

③ Solve the inequality directly

$$2|x-5| \geq \frac{13}{2}$$

$$|x-5| \geq 6.5$$

inside  $\geq 6.5$

$$x-5 \geq 6.5$$

$$x \geq 11.5$$

inside  $\leq -6.5$

$$x-5 \leq -6.5$$

$$+5 \quad +5$$

$$x \leq -1.5$$

$$④ \quad 4m^5 \cdot 3m^{-7} = \frac{12}{m^2}$$

$$⑤ \quad \frac{x^2}{w^{-7}} \cdot \frac{x^3 w^2}{x} = x^4 w^9$$

$$⑥ \quad \left( \frac{m^5 n^{-3}}{y} \right)^{-2} = \frac{y^2 n^6}{m^{10}}$$

HW  
Questions

**4-22.** Solve  $(x - 3)^2 - 2 = x + 1$  graphically

**4-23.** Graph a system of equations to solve  $2|x-4|-3 = \frac{2}{3}x - 3$ .

$$y = 2|x-4| - 3$$

$$y = \frac{2}{3}x - 3$$

$$y = |x|$$

$$x =$$

$$x =$$

**4-24.** Solve each of the following equations using any method.

a.  $-3\sqrt{2x-5} + 7 = -8$

$$\text{b. } 2|3x+4|-10=12$$

4-27. Solve the following equations. Be sure to check your answers for any extraneous solutions.

$$\text{a. } \sqrt{2x-1} - x = -8$$

+x            +x

$$\left(\sqrt{2x-1}\right)^2 = (x-8)^2$$

$$2x-1 = (x-8)(x-8)$$

$$\text{b. } \sqrt{2x-1} - x = 0$$

**4-28.** Find the value of  $x$ .

Use the solutions to check your answers carefully.

- You have 5 minutes.  
-Use a pen, record your scores

AIM today:

- Determine the meaning of the solutions of systems ( as they relate to their graphs )
- Find solutions to complex systems

- What do solutions to Systems look like?

What do solutions look like?

$$\frac{2}{x} = 5\sqrt{x+5} - 6$$

Not a system

$$x =$$

$$x =$$

$$x + 2y = 7$$

$$3x - y = 18$$

A complex system

$$\begin{matrix} x = \\ y = \end{matrix} ( , )$$

The solution of a system of equations will be a pair of values

$$x + 2y = 7$$

$$3x - y^2 = 18$$

$$x^2 + y^2 = 25$$

$$y = x^2 - 13$$

You will be given 4 systems. (a,b,c,d)

Follow the instructions on the [hand out](#)

**INSTRUCTIONS:** Solve each of the four **SYSTEMS** of the equations the following way.

1. Solve algebraically first.
2. Then graph the system (*and make a quick sketch*)
3. Explain what the meaning of the algebraic solution tells you about the graph.

You can do the work on the hand out or in your own notes. This work will be a good resource for tonight's assignment and upcoming work.

on  
#B

**b**

$$y = \frac{1}{2}x^2 + 1$$

$$y = 2x - 1$$

2nd equation  
should look  
like this

After each question

What did the solution tell us about the graph?

**a**  $y = -3x + 5$   
 $y = -3x - 1$

$$-3x - 1 = -3x + 5$$
$$-1 = 5$$

false state

- NO SOLUTION TO the system

$$\textcircled{a} \quad y = -3x + 5$$

$$y = -3x - 1$$

$$-3x + 5 = -3x - 1$$

$$5 = -1$$

a false statement which  
means....

NO SOLUTIONS

$$\textcircled{a} \quad y = -3x + 5$$

$$y = -3x - 1$$

$$-3x + 5 = -3x - 1$$

$$5 = -1$$

a false statement which  
means....

NO SOLUTIONS

$$\textcircled{a} \quad y = -3x + 5$$
$$y = -3x - 1$$

$$-3x + 5 = -3x - 1$$

$$5 = -1$$

a false statement which  
means....

NO SOLUTIONS

What did the  
solution tell us?

No solutions  
indicate that the  
two do not  
intersect.

$$\text{b) } y = \frac{1}{2}x^2 + 1$$

$$y = 2x - 1$$

4x

$$\text{b) } y = \frac{1}{2}x^2 + 1$$

$$y = 2x - 1$$

$$\frac{1}{2}x^2 + 1 = 2x - 1$$

$$\frac{1}{2}x^2 = 2x - 2$$

← clear fractions

$$x^2 = 4x - 4$$

$$x^2 - 4x + 4 = 0$$

$$x = 2 \rightarrow$$

$$\begin{matrix} x=2 \\ y=3 \end{matrix}$$

$$\textcircled{b} \quad y = \frac{1}{2}x^2 + 1$$

$$y = 2x - 1$$

What did the  
solution tell us?

The line is tangent  
to the parabola.

$$\frac{1}{2}x^2 + 1 = 2x - 1$$

$$\frac{1}{2}x^2 = 2x - 2$$

$$x^2 = 4x - 4$$

$$x^2 - 4x + 4 = 0$$

$$x = 2 \rightarrow \begin{matrix} x = 2 \\ y = 3 \end{matrix}$$

$$\textcircled{c} \quad y^2 = x$$

$$y = x - 2$$

Try something

Can ask for a hint  
in a bit

(c)  $y^2 = x$   
 $y = x - 2$

$\sqrt{y^2} = \sqrt{x}$   
 $y = \pm \sqrt{x}$

$(4, 2)$   $(1, -1)$

$y = y^2 - 2$   
 $0 = y^2 - y - 2$   
 $0 = (y + 1)(y - 2)$

$y = 2$   $y = -1$  ✓

$$\text{d) } 4x - 2y = 10$$

$$y = 2x - 5$$

$$\text{d) } 4x - 2y = 10$$

$$y = 2x - 5$$

$$4x - 2(2x - 5) = 10$$

$$4x - 4x + 10 = 10$$

$$10 = 10$$

true

infinite  
of solutions

What did the  
solution tell us?

Infinite  
solutions  
indicate the  
same line.

# Assignment

**4**..... 40 - 43, 44c

You can replace any question from the above assignment

- with a more challenging system

$$x^2 + y^2 = 25$$

$$y = x^2 - 13$$

You can check your answer with me tomorrow.

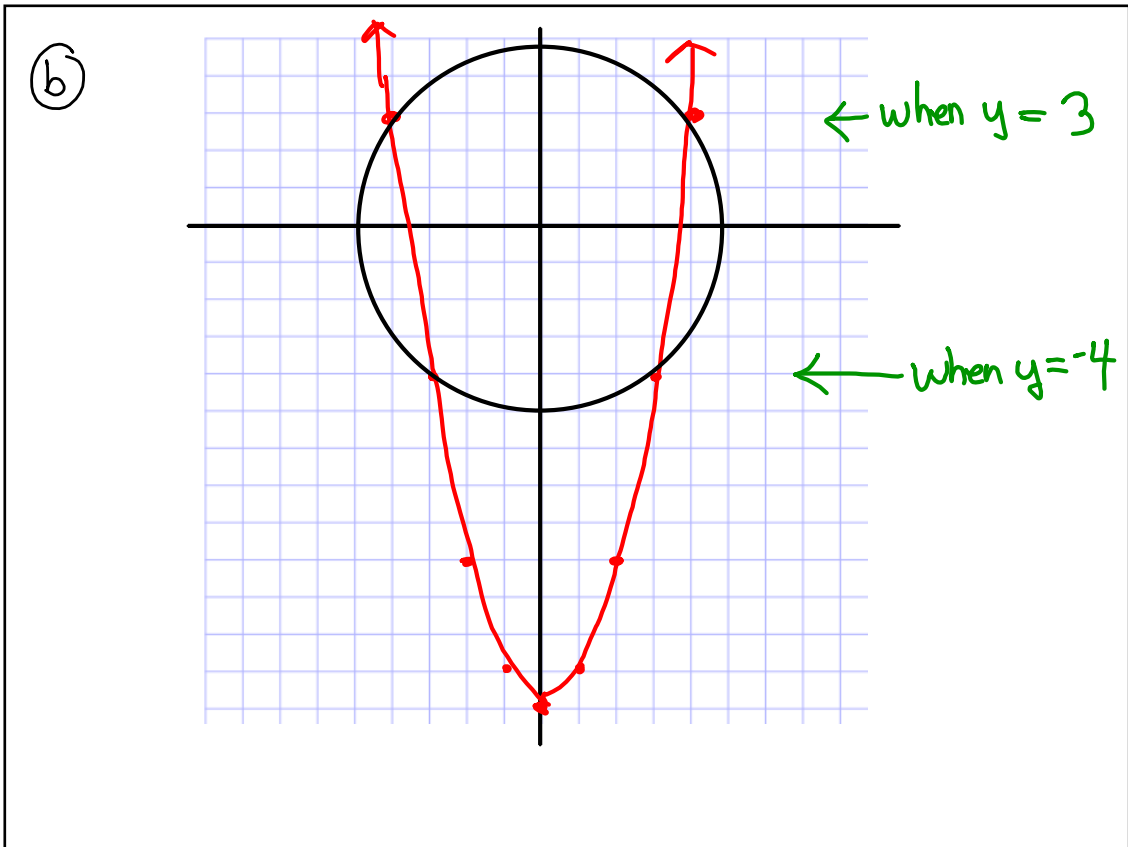

with that  
in mind

4 - 37

a you

c together

(c) combine to  
create new

(c)  $x^2 + y^2 = 25$   $y = x^2 - 13$  the difficult way

$x^2 + (x^2 - 13)^2 = 25$

$x^2 + (x^2 - 13)(x^2 - 13) = 25$

yikes!

or .....

$x^2 + y^2 = 25$        $y = x^2 - 13$       the easier way

$x^2 = y + 13$

$x = \pm \sqrt{y + 13}$

$(\pm \sqrt{y + 13})^2 + y^2 = 25$

$y + 13 + y^2 = 25$

$y^2 + y - 12 = 0$

$y = -4$        $y = 3$

(d)  $y = -4$        $y = 3$

$x^2 + y^2 = 25$   
 $y = x^2 - 13$

$-4 = x^2 - 13$

$9 = x^2$

$x = \pm \sqrt{9}$

$x = \pm 3$

• two of the four points are  $(-3, -4)$  and  $(3, -4)$

then plug in  $y = 3$  to find the other two
