

## Section 7.3 Law of Cosines

Use when SAS or SSS

For SAS

$$a^2 = b^2 + c^2 - 2bc \cos \alpha$$

$$b^2 = a^2 + c^2 - 2ac \cos \beta$$

$$c^2 = a^2 + b^2 - 2ab \cos \gamma$$

For SSS

$$\cos \alpha = \frac{b^2 + c^2 - a^2}{2bc}$$

$$\cos \beta = \frac{a^2 + c^2 - b^2}{2ac}$$

$$\cos \gamma = \frac{a^2 + b^2 - c^2}{2ab}$$

ex: Solve the triangle

$$a = 7.2$$

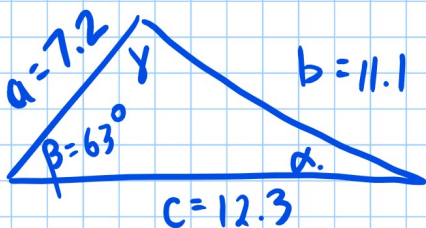

$$c = 12.3$$

$$\beta = 63^\circ$$

$$b = \underline{11.1}$$

$$\gamma = \underline{80.9^\circ}$$

$$\alpha = \underline{36.1^\circ}$$

$$b^2 = a^2 + c^2 - 2ac \cos \beta$$

$$b^2 = 7.2^2 + 12.3^2 - 2(7.2)(12.3) \cos 63^\circ$$

$$b^2 = 122.72$$

$$b = 11.1$$

$$\frac{\sin \gamma}{12.3} = \frac{\sin 63^\circ}{11.1}$$

$$\sin \gamma = \frac{12.3 \sin 63^\circ}{11.1} = 0.9873$$

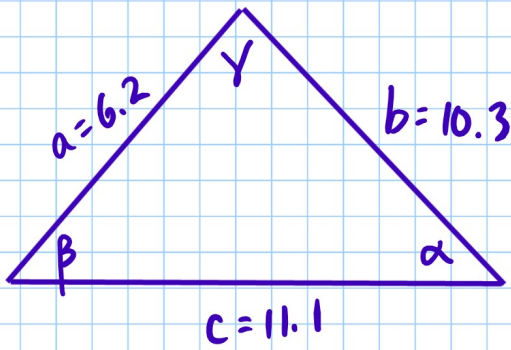

$$\gamma = \sin^{-1} 0.9873$$

$$\gamma = 80.9^\circ$$

$$\alpha = 180 - 80.9 - 63$$

$$\alpha = 36.1^\circ$$

ex:

$$\alpha = \underline{33.4^\circ}$$

$$\beta = \underline{66.2^\circ}$$

$$\gamma = \underline{80.4^\circ}$$

In SSS case, ALWAYS find the biggest angle first.

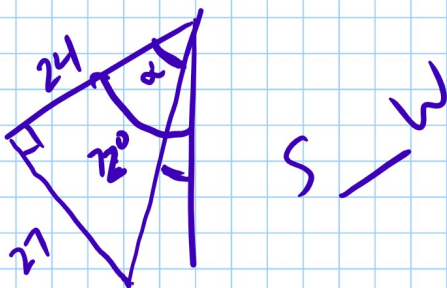

$$\cos \gamma = \frac{a^2 + b^2 - c^2}{2ab} = \frac{(6.2^2 + 10.3^2 - 11.1^2)}{(2 \cdot 6.2 \cdot 10.3)} = 0.1669$$

$$\gamma = \cos^{-1}.1669 = 80.4^\circ$$

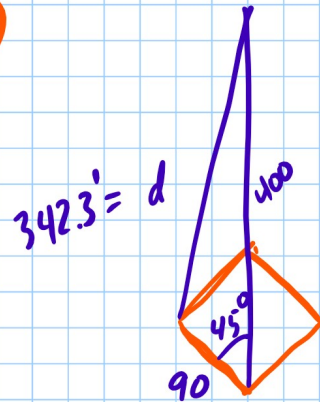

$$\cos \beta = \frac{a^2 + c^2 - b^2}{2ac} = \frac{(6.2^2 + 11.1^2 - 10.3^2)}{(2 \cdot 6.2 \cdot 11.1)} = 0.4037$$

$$\beta = 66.2^\circ = \cos^{-1}.4037$$

33)

$$d^2 = 90^2 + 400^2 - 2 \cdot 90 \cdot 400 \cos 45^\circ$$

$$d^2 = 117188.31$$

$$d = 342.3'$$
