

1. My company is Gonzalez Technologies and it is a company that makes futuristic technology. It was founded in Eugene, Oregon July 30th 2003 by Diego Gonzalez. He founded the company because he thought that today's technology just wasn't good enough. He designed his first smart phone three days later, perfected it and released it after two months. It sold 1 billion in the first month.

2. Gonzalez technologies makes the most advanced smart phones out there. That is what makes us unique. We also sell smart headphones, smart robots, smart cars, and smart TV, so people won't have to be smart anymore. (I was just kidding on that part).

3. The buildings for Gonzalez Technologies are big and comfy. The furniture is nice and tidy. Most of the workers are all busy and work nicely with each other and are treated with kindness and respect.

4. Gonzalez Technologies target people who are wealthy enough to buy our products. Especially the ones who are very busy. We want to make their lives easier and better. We are very noticeable to those people.

5. Our mission statement is that all of our products will be above expectations and will make your life a lot better and easier. Our Tagline is "Better is just better."
