CP CS Proposal

# Complex Problem Complex Solution Proposal

What I would like to do for my CP CS is a lemon squeezer. I think this will qualify as complex because it will have a hinge and some of the shapes that I will have to make will be hard to design. I am not entirely sure what tools I will be using, but it will probably involve some tools we have not experienced yet. I think that this should take me about 7 class periods. Maybe more time will be required, but I hope not. I think this will be very fun.
