History of Apple

Apple is one of the most successful companies in the world and maybe the most successful tech industry based company in the world. Apple was created on April 1st, 1976 by Steve Jobs, Steve Wozniak, and Ronald Wayne. We usually don't hear the name of Ronald Wayne when it comes to Apple, that's because he sold his share of Apple for 800 US dollars when Apple was developing. He could have been a multi millionaire or billionaire right now if he didn't sell his share then.

In 1976 the Apple 1 was born. It sold for \$666.66 dollars. Apple didn't take off until 1977 when the Apple 2 was introduced at the West Coast Computer Fair in April of 1977, which sold for \$1,298 dollars. When the Apple 3 was introduced, Apple had thousands of workers already building and selling computers all over the world. As the years past, computers have gotten better by getting faster internet, better software systems, and get smaller and more portable. More apps can be downloaded. You can also shop online.

First came computers, now come ipods and phones. In 2007 Steve Jobs announced the very first Iphone, the Iphone 4g. It was sold for \$499 dollars and the Iphone 8g was sold for \$599 dollars. The first Ipod, the Ipod touch 5gb came out October 23rd, 2001 and sold for \$399 dollars, the Ipod touch 10gb sold for \$499 dollars.

Over the years the Ipod and Iphone have changed. The Iphone's early body looked like a earlier Ipod touch. The Ipod could only hold very little music and could not download any games.

The third and final topic is on ipads. The Ipad was announced on January 27th 2010 at a media conference. The Ipad had a large build and a big screen, to me the first ipad looks like a kindle or a children's tablet. It sold for \$500 dollars and was a hit to gamers. The cords to plug the ipad in have evolved too! Apple did a pretty good job when it came to variety in their products. They have a song player, phone, tablet and much more.

In conclusion Apple is a very successful company when it comes to electronics, and the company is doing pretty well when the people who started the company were college dropouts!
