## It's Not Fair

Answer the following questions after completing the activity.

1. Describe your organism after all the rounds. Include in your description all components that are included in the original description that have not been changed by mutations.
2. Did your organism survive or go extinct? If it went extinct, when? If it survived, how large is the population (based on your final score)?
3. Were most environmental changes helpful or harmful to your organism? Why do you think this was the case?
4. Why isn't natural selection "fair"?
