1. What are three main features that distinguish primates from other mammals?

2. What are the two main groups of primates?

3. What two groups did the anthropoids split into about 45 million years ago?

4. What is another name for hominoids? What are some examples of hominoids?

5. What is a hominin? What are two features of hominins that distinguish them from other primates?

6. Do researchers think that human evolution took place in simple steps in which hominin species evolved more human traits over time? If not, how do they think human evolution took place?
7. Compare and contrast the Multiregional hypothesis of human evolution and the Out of Africa hypothesis.

8. What does it mean to be bipedal?

9. What is the earliest hominin that is thought to be ancestral to humans? How long ago did it live?

10. What is significant about the relationship between Homo Neanderthalensis and Homo sapiens?
