

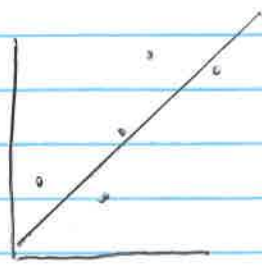

Graphing - Types of Graphs

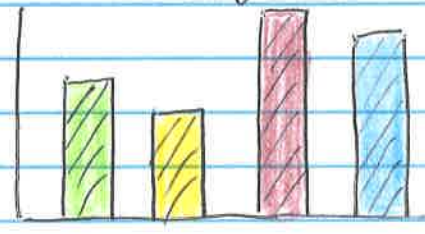

A graph is a visual way to organize data.

1) Scatterplot = Line or curve of Best Fit graph

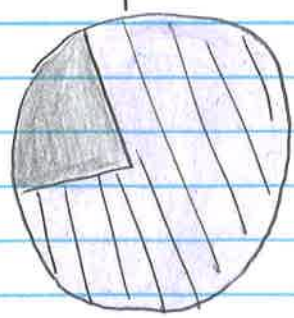

An XY graph that shows a relationship between two variables.

2) Bar graph compares data grouped by category or name or ranges.

3) Pie graph shows the amount each part makes up of the whole.

4) "connect the dots" or line graph is used to show trends in data over time.
