

## **BiologyA: Drugs and Biochemistry Research Project**

### Oral Presentation Tips

- Make eye contact with your audience. Do not look down constantly at your note cards or at the screen.
- Memorize a large portion of your presentation. Talk to the audience rather than read from a script.
- Rehearse your presentation several times. Practice!
- Know how to pronounce words, know their meaning, and be able to answer questions about your topic.
- Talk clearly (enunciate) and slowly. Speak loud enough for everyone to hear.
